Vee-Go Grow™ plant and soil revitalizer is such a necessary, well developed and unique product that we believe it will become an industry staple. This is not just because it helps to clean up and rejuvenate the soil from the rigors of chemical fertilizers, herbicides, fungicides, pesticides, air pollution..., but because it increases harvests and productivity. The more feedback we get from farmers and growers of all types, the more excited we are to share it with more people. Below we have put together some photos and descriptions of Vee-Go Grow in use. We hope you will be really motivated to give it a try!

If you grow tomatoes, you will like what Vee-Go Grow™ can do for you!

Take a look at the photos below. You will notice the plants grow faster, thicker and with much better root development. The flowering and tomato output is up to double that of untreated plants with larger better tasting fruit!

Untreated tomato plant, 6 wks, 7" high

Vee-Go Treated tomato plant, 6 wks, 12" high

Untreated plants, 8 wks, 16" high

Vee-Go Treated plant, 8 wks, 24" high

Untreated Tomatoes – 33” high ↓

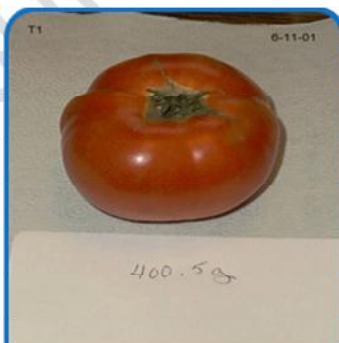

Treated Tomatoes - Over 42” high ↓

Larger, bushier plants that are setting many more flowers are resulting in loads of big, juicy, nutritious tomatoes. Yields may increase by as much as 100% with the use of Vee-Go Grow™. The fruits are showing a longer shelf life!

Loads of tomatoes at 10 -12 weeks. A 10% increase in production can mean an extra \$1500/acre. We are a good bet to well exceed that!

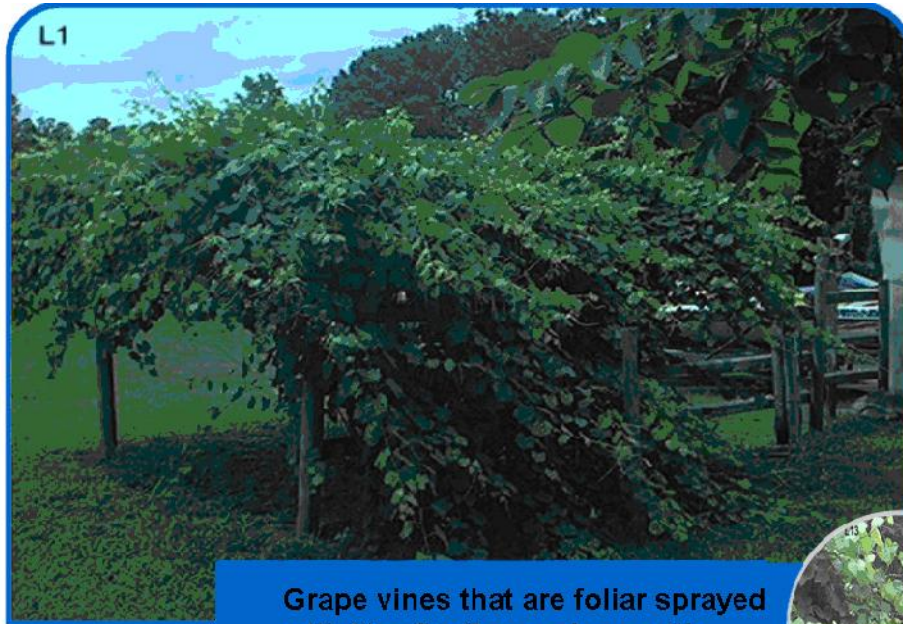

An average good size tomato at 12-15 + oz

Healthy and good tasting! With many SRL treated fruits the brix rating goes up!

L1

Grape vines that are foliar sprayed with Vee-Go Grow, along with some sprayed around the roots, have branches standing straight out instead of hanging down!

WC2-24

Hayfield three weeks after being planted and treated with Vee-Go Grow. It was ready for cutting so quickly that the farmer was not prepared for cutting and bailing!

Hayfield goes crazy!

Hayfield five weeks after being planted and treated with Vee-Go Grow. Bound up nutrients are released back into the soil and absorbed by a greatly enhanced root system. The farmer got three cuttings in the time it would normally take to get one!
